

Your **USER ACCOUNT** for accessing saved journal lists and reports

SEARCH for a journal by name, ISSN, or JCR abbreviation

CHOOSE one or more categories for analysis

FILTER by edition or Open Access status

FILTER by Journal Impact Factor quartile

SET an Impact Factor or percentile range

The screenshot shows the InCites Journal Citation Reports interface. At the top, there are navigation links for Web of Science, InCites, Journal Citation Reports, Essential Science Indicators, and EndNote. The main header includes the InCites logo and Thomson Reuters branding. The interface is divided into a left sidebar with navigation options like 'Go to Journal Profile', 'Compare Journals', and 'View Title Changes', and a main content area. The main content area features a network graph of journals and a table titled 'Journal Titles Ranked by Impact Factor'. The table has columns for 'Full Journal Title', 'Total Cites', 'Journal Impact Factor', and 'Eigenfactor Score'. A sidebar on the left contains various filters such as 'Select JCR Year', 'Select Edition', 'Open Access', 'Category Schema', 'JIF Quartile', 'Select Publisher', 'Select Country/Territory', and 'Impact Factor Range'. Callouts from external text boxes point to these various elements, explaining their functions.

— KEY METRICS

TOTAL CITES

Total cites indicate the total number of times that each journal has been cited by all journals included in the database within the current JCR year.

IMPACT FACTOR

The Impact Factor identifies the frequency with which an average article from a journal is cited in a particular year. You can use this number to evaluate or compare a journal's relative importance to others in the same field or see how frequently articles are cited to determine which journals may be better for your collection.

FIVE-YEAR IMPACT FACTOR

The Five-Year Impact Factor is the average number of times articles from the journal published in the last five years have been cited in the JCR year. This metric can be used to better gauge the impact of journals in fields where the influence of published research evolves over a longer period of time.

IMMEDIACY INDEX

The Immediacy Index measures how frequently the average article from a journal is cited within the same year as publication. This number is useful for evaluating journals that publish cutting-edge research.

CITED HALF-LIFE

The cited half-life benchmarks the age of cited articles by showing the number of years back from the current year that account for 50% of the total number of citations to a journal in the current year. This number is useful in making collection management and archiving decisions. A publisher may use this number to adjust editorial policies to compete in different market segments.

CITABLE ITEMS

The number of items considered in the denominator of the Impact Factor calculation. Document types considered citable are Articles and Reviews. Editorials, news items, and similar content are excluded from the denominator, but can contribute citations to the numerator.

JIF (JOURNAL IMPACT FACTOR) PERCENTILE

The journal's rank in category, determined by Impact Factor, expressed as a percentile. For example, a journal with a JIF percentile of 89 performs better than 89% of journals in that category.

EIGENFACTOR® METRICS

Eigenfactor metrics are based on the JCR-cited journal data and consider not only the counts of citations a journal receives but also the structure of the citation network as a whole to measure citation influence in the scholarly literature. These metrics are available for JCR year 2007 and later. More detailed information can be found at <http://www.eigenfactor.org>.
